Company at a glance

“Databiz delivers industry-standard quality software outsourcing service and ensures free prototype development (for new outsourcing clients) along with management consulting service (from domain expert) with every software development and also guarantee 24/7 after sales service support and a dedicated project management team in a very reasonable cost”

Databiz is IT Solution Provider Company managed by a group of professional with over 700+ customers all around the Globe. Founded in 1999, it offers wide range of Business Solution along with Management Consulting Service to serve the customer requirement from the very root level. It has wide experience of working on different Platform from Proprietary to Open Source along with several devise based programming including PDA and Smartphone Phone (Iphone, Windows Phone, Android, J2ME) and GPS Navigation system.

Along with many business domains, Databiz has the special expertise on Distribution, Inventory (including Replacement and Warranty), Supply Chain, Accounts and Production ERP, Educational Sector, Real-estate and Hospitality Sector (Hotel and Restaurant).

Mission & Strategy

The company' mission is to deploy best quality software in time as per customer requirements along with ensuring after sales service by a trained team. Being one of the prominent Software house in local market, its aim is to become market leader in local market by the end of 2013 and one of the prominent players in International market during 2015.

It has enriched its product line by some exportable off the shelf products and also built up a very competent team for outsourcing work. Databiz believes that software outsourcing work to Bangladeshi companies are really dependent on the exposure of the country image as a whole for "Bangladesh", not by efficiency of a single company. And so, it always goes for united and combined Country Campaign along with its regular marketing effort.

Regarding HR policies, Databiz prefers the technically tuned and well professional developers. It plans a mix of trained and highly educated development team for Software, Mobile and Web programming. To become the market leader, Databiz relies on less shiny rather more worthy professional environment and which already led it to the prominent position in the industry.

Bangladesh Next

Why Bangladesh Next?

The demographic advantage, the stability and the social developments have set the platform for Bangladesh to emerge as the one of the next large players of global service outsourcing market. As outsourcing costs in traditional countries like China, India and Philippines are rising dramatically and global clients are increasingly looking for diversification of sourcing portfolio, Bangladesh is surely the Next best alternative.

- Bangladesh possesses one of the most attractive population demography in the world. This is a country powered by youth. In terms of number of youth population, Bangladesh is among top ten countries of the world and top five within Asia. This unique age demography makes Bangladesh as one of the best attractive country for service outsourcing (ITES/BPO, Software, Call centre etc.).
- A significant portion of the youth population is proficient in English. Within the non-speaking developing countries, Bangladesh education system has the 3rd largest number of enrollment in English courses at secondary and higher secondary level. Because of this second-language advantage, the country is surely one of the natural choices for service outsourcing for English speaking North American countries.
- Adoption to new digital lifestyle among young generation is very high. The urban youth are quite tech savvy and always keep pace with different modern tech-driven lifestyle updates (e.g. in terms of Facebook users, Bangladesh ranks within top twenty in the world. The country already has over 2 million facebook users).
- Over 10 million (around 7 percent of total population) citizens of the country work outside the country (4th highest in the world), in different parts of the world. This has contributed significantly in cross-cultural adaptability skill of the professionals. A significant number of the overseas people are technology professionals. They are working successfully in

Gartner

Gartner's Ranking

Bangladesh Enters Global IT Outsourcing Map: Gartner lists Bangladesh as one of Top 30 Outsourcing Country

different leading technology companies at different parts of the world. This technology skilled diaspora can also be instrumental in outsourcing boom (as it has been the case in India).

- Within the country, the rapid technological development in recent years has set the tone for significant growth in technology driven service industry. Mobile growth in the country is one of the highest in the developing world. Major technology infrastructure like country-wide fiber connectivity, Wi-Max broadband, 3G are being implemented at quick pace.
- During last few decades, the country has achieved significant social sector development, particularly in education and health. As recognition of this, Bangladesh has recently won UN Millennium Development Goal (MDG) Award.
- During last decade, Bangladesh economy has emerged as one of the most stable developing economies of Asia. Helped by very strong growth in both export and foreign remittance, the local currency (Taka) is one of the most stable currencies.

Bangladesh IT

Powered by people

- Over 25,000 IT engineers are working in over 600 software and IT service companies: around 150 of these companies are specialized in serving overseas clients.
- Specialized IT Education in Bangladesh is well established at the graduation and post graduation levels. Over 90 universities and 700 colleges across the country offer IT education programs. Every year, over 6,000 IT graduates come out of these universities and colleges.
- A large part of these IT graduates also possess global IT vendor certifications (e.g., from Microsoft, Cisco, Oracle, Sun) on top of their academic degrees.
- Excellence of IT workforce from Bangladesh is a well-accepted fact at home and abroad. Over 10,000 IT professionals from Bangladesh are working successfully in various IT companies

“Over 90 universities and 700 colleges across the country; over 6,000 IT graduates every year”

in USA including Microsoft, Intel, IBM, Sun, Oracle, Texas Instruments, Cisco, Nortel, and Lucent - to name a few.

- Bangladesh Government and the IT industry have taken up aggressive plans to scale up the number of IT workforce to meet the increasing demand. The plans include national skills assessment and enhancement programs for IT professionals, increasing the number of yearly IT graduates to 10,000 and development of outsourcing focused specific skill sets.

Government Support to IT outsourcing

- Software and IT Services have been declared by the Government as a 'High Priority' export sector.
- All Software and IT Services companies including those having foreign ownerships have been exempted from Income Tax until 2011.
- Special government sponsored long-term equity fund and short term working capital financing are offered to IT companies.
- Since 1996, Government has been allowing zero/low tariff for computers and other capital goods required for software industry.
- Special Hi-Tech and Software Technology Parks are being built by the government to facilitate all the infrastructural supports needed by outsourcing companies.
- ICT Policy 2009 has been approved by the Govt. of Bangladesh in June 2009
- A Roadmap to transform Bangladesh into 'Digital Bangladesh' has also been formed

Methodology

Comment from Partner

Databiz ensured Quality and Timely Delivery of all our projects during the last 5 years of our outsourcing partnership with them. I will definitely continue to use them as our preferred choice of partner with regards to future projects, not just because of their high standards of output, but also because of their invaluable input during the delivery stages of a project which sets them apart from other like minded companies.

Faisal Muktadir
Managing Director
Forward Innovation
London, UK.

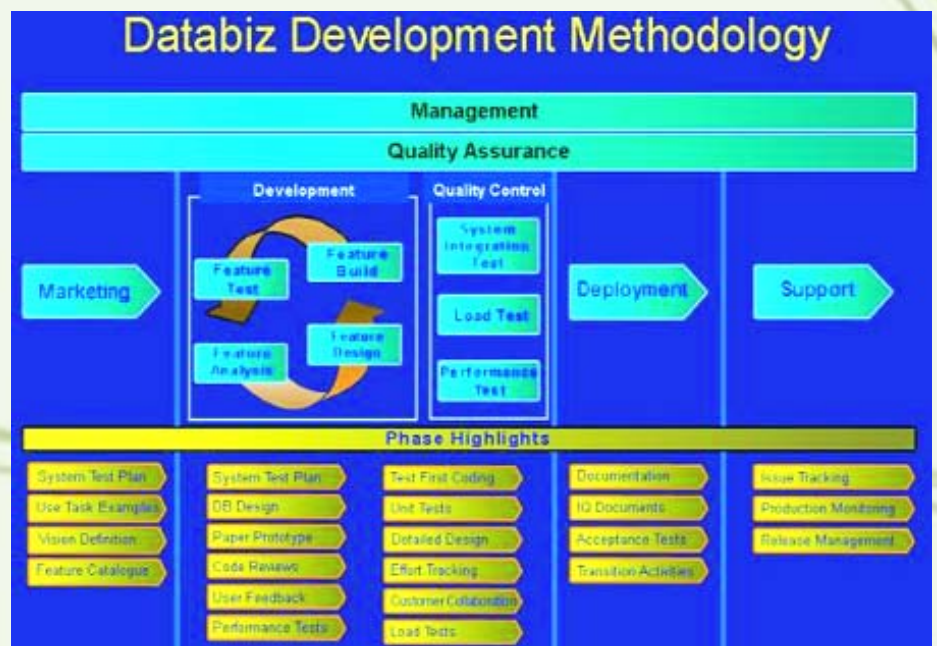

Comment from Client

Databiz Software relieved me from the huge hassle of my business operation in multiple countries with multiple currencies. Now Quick Decision Making and MIS tools, Employee productivity and Organizational efficiency using their software gives me a competitive edge of business enhancement in the coming years.

Arif Hossain
Chairman
Global Link Industrial
Company Ltd
Goancho, China

Software development is both an art form and a science. Databiz finds the perfect balance between the two, allowing our developers to ingeniously solve the challenges inherent in the bounds of real world specifications.

On Time, On Budget, On Scope. We did not come up with it. Our customers did. Databiz methodology is simple because we start with the basics. We evaluate a company's needs and create an overall vision. This vision is born out of user, system and design

specifications for each project. We then model each project, building it for scalability and sustainability. These process results in accurate estimates, shortened delivery times and effective systems that work.

If you need to integrate new applications with those already in places, we develop strategies and solutions to efficiently achieve that goal with minimal interference in day-to-day operations. We will test the concept prior to implementation through building a Proof-of- Concept model, demonstrating the new system's feasibility and allowing you to see how it integrates into the current infrastructure.

If your needs include the development of a complete enterprise system, we design a comprehensive solution that takes into account all of your requirements. We will design a system based on scalability and sustainability, evaluating both your current and future needs.

Why Databiz

- ❑ Specialized PM, Development, Testing and QC team
- ❑ Over 1000+ customers worldwide
- ❑ Support Centre in UK, Germany (Europe) and Australia
- ❑ Ready to provide some sample applications (Prototype) free of cost
- ❑ Flexibility of HR working team formulation
- ❑ Flexible Organizational policy

And some more:

- ❑ Excellent Commitment and Timely Completion/Delivery
- ❑ High Quality and Documentation
- ❑ Comparatively Low costing
- ❑ Dedicated Project Management Team (with 10 fluent English Speaking person) specially designed for International clients and Transparent Project Management Process
- ❑ Free Management Consulting (with proper business domain knowledge)
- ❑ 24/7 Telephone, Email and Chat Service for valued Clients
- ❑ Substantial discount for continuous work provider
- ❑ A standard after sales service (at least for 3 months) to valued customer
- ❑ Strong confidentiality

After Sales Support/Service

Databiz is very concerned to provide all sorts of service and support facilities to all of our clients, anywhere and any time. We believe, constant support from our part is essential, not only for the customer's satisfaction, but it is a matter of our reputation and existence.

Type of Service/Support

An Experienced and Trained support team (currently 12 in number) is dedicated for customer support. Databiz offers round the clock services to its clients (based on the agreement). Databiz demands confidently that members of our support team will be at your service (locally) within three hours (180 Minutes) of your call for physical support.

International Partner Support

We have support partners in UK, Germany, Australia, Nepal, Dubai.

Comment from Employee

Since 2001 (10 years+), I have been working with Databiz and now holding one of the key positions in the company starting from entry level executive. The environment is very much flexible and positive for any employee development and company invests sufficient amount in HRD. The management is, as a whole, dynamic and very friendly in nature. The total environment is like a family which forbade me to think for any job switching after joining. I am very much interested to work in a Long term relationship with International companies and ready to take any challenge along with my team.

Hedayet Ul Islam

Manager
Databiz Software Ltd.

We ensure

For Desktop

- ❑ Proper Documentation and Bug free Application
- ❑ Performance Tuning Service
- ❑ User friendly Interface
- ❑ Security
- ❑ International Standard modules
- ❑ Multilingual Supporting

For Web

- ❑ Search Engine Optimization
- ❑ W3 Standard and Encrypted Open Source
- ❑ Faster output with security
- ❑ User Friendly GUI and Multilingual Support
- ❑ Control Panel

Zonal Support (For local/Domestic Only)

The support team serves its function by dividing the existing market of Databiz into different Working Zones. There is a person dedicated to serve each zone. He also takes all the responsibility of the Zonal supports. Each person on the zones carries a Hand Phone, through which, the clients can ask for their service any time. They are able to provide solutions to soluble problems over the phone as quick response or they reach the client's site by three to four business hours for major problems.

A Special Approach (DCSP): For Customer Support, Training and Implementation

DCSP: Databiz Certified Solution Provider

In brief: DCSP program is a special program innovated and implemented by Databiz (for the first time in country) for extending its clients support anywhere in Bangladesh.

Background: when the no of clients of Databiz was increasing day by day, the company management realized that the regular day to day support and user training of clients outside of Dhaka will not be possible by its dedicated support team. So it planned to go for support centres from District level by creating a partnership with some selected computer vendors / IT businesses who will work on behalf of Databiz as their local support and sales representative.

Procedure of Training:

- ❑ Databiz gave them in-house training by fetching one or two support personnel of their selected vendors locally in Dhaka.
- ❑ After an extensive training and exam session, Databiz nominated the selected candidate as DCSP and authorized them to provide support on its behalf.
- ❑ Databiz is continuously monitoring the DCSP program by a two member team dedicated for DCSP coordination.
- ❑ Databiz has the right to change any vendor due to not having performance eligibility
- ❑ DCSP personnel are although vendors' staff, but they act on behalf of Databiz and Databiz provide them benefit and remuneration on case to case basis.
- ❑ Minimum qualification of DCSP's support personnel is IT Graduate/Diploma or 3 years relevant experience.

Total Support Point: 74 in 60 districts

Result: One stop customer service and Training from anywhere in Bangladesh.

Support Center in UK Germany and Australia

On-line Support (Local and International)

We also provide on line service from our own developed online module. You can ask for any problem here and have the opportunity to enjoy quick (Maximum 5 minutes) solution. A recent addition with this is Online Chat facility which is now being offered GMT 3 AM to GMT 2 PM (for all). Round the clock (24/7) Support/Service is provided under the contract with valued clients and a dedicated Cell/Online booth is provided for them. Long distance physical support (for countries abroad) may also be provided based on the agreement.

Maintenance Contract Policy

Maintenance contract is not mandatory with any of Databiz's solution or application. But even then if clients want to go for any long term service contract (monthly or yearly) they will get the following features in addition with the existing support facility.

- Unlimited service visits to clients' location after getting any reasonable service call from you.
- Routine visits to clients' location at least once a month even if they do not have a call.
- Quarterly Free Up-gradation of the existing solution.
- No extra charge for your new Employee Training
- No extra charge for any new Machine (Server or Workstations) Configuration (our Solution)
- Free consulting service facilities by Databiz if you feel necessary for your Organization.
- Unlimited phone service from our instant support booth.
- Fixing problem on priority basis
- Free Membership of Databiz-On-Line
- And many more.

So Databiz Support in a nutshell:

- System delivery within the proposed committed time
- At least Three months authentic free support. It may also be extended or deducted depending on the complexities and contract agreement for that software.
- No additional cost is taken for customization up to 50 man-hours (only for customized software).
- Free training before implementation
- Databiz provides full time physical support personnel at the time of implementation (for local clients)
- Dedicated Online Support desk for International Customers
- Round the clock 24/7 support facility for valued clients.

Logistics

7. User can Search for an area and get the nearby ATM locations of that area.

FoodNearby

FoodNearby is a new generation online menu ordering and Restaurant Finder web application specially designed for the people on the go. It is fully functional for the mobile or desktop web both. This application's desktop browser version has an admin panel designed for the restaurant owners to manage their contents. This application is using the latest technologies and attractive features which will be very helpful for the users.

Features:

1. User doesn't need to create app store account to use this application
2. Display the restaurants around him
3. User can get menu and different offers from registered restaurants
4. User can order foods from the online menu
5. User can get route, map location and review of all of the restaurants
6. User can make a call directly to that restaurant (conditional)
7. User can view his order history
8. User can share on Facebook or other social networking sites
9. Restaurant owners can create Menu, Promotions, Advertisement for the users

List of Key Process

- ❑ MARKETING/PROJECT INITIATION
- ❑ DEVELOPMENT
- ❑ QUALITY CONTROL
- ❑ DEPLOYMENT
- ❑ SUPPORT
- ❑ ACCOUNTS
- ❑ ADMIN
- ❑ HUMAN RESOURCE MANAGEMENT

Marketing/Project Initiation

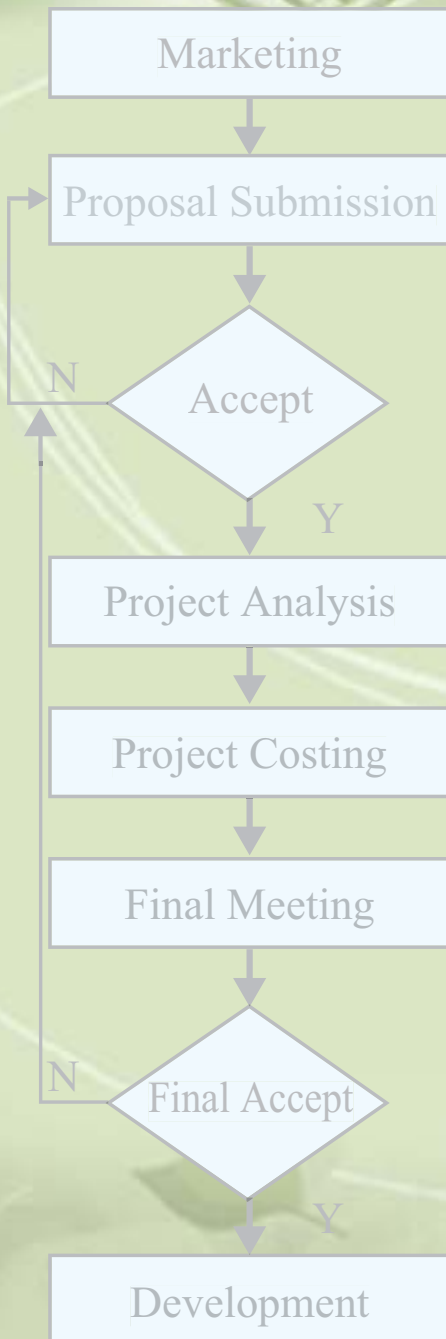

For the success of any project, Marketing is one of the most critical steps. It is the foundation of all other activities, The function of the Marketing phase is not only to develop all inclusive requirement documents but also to define and understand the client's vision and priorities. The Marketing phase is also used to test and validate high-risk items such as new technologies or frameworks required for high priority capabilities.

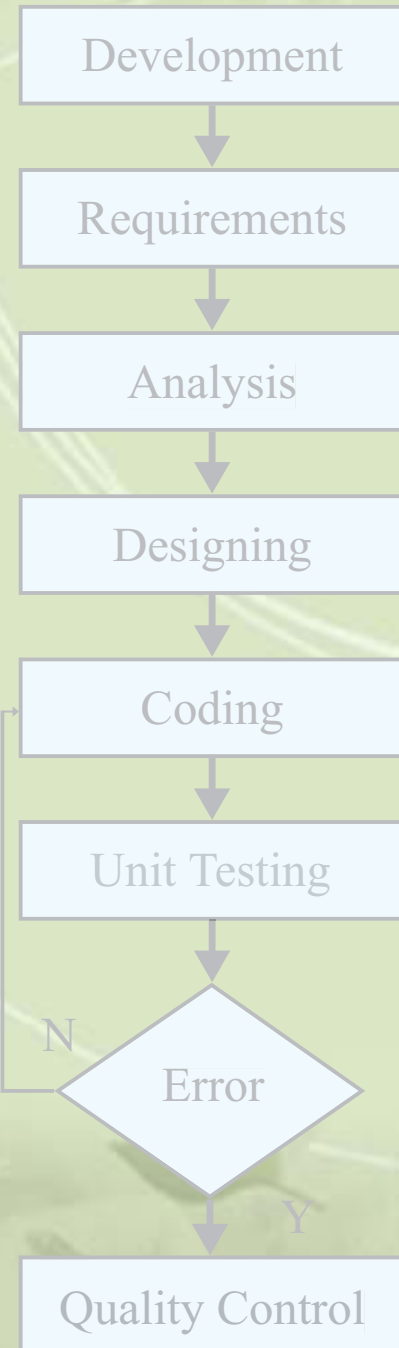

Key actions in this phase of the project life cycle includes:

- ❑ Contextual question
- ❑ User activities analysis
- ❑ Document Prototyping (General UI Testing)
 - ◆ Development of Vision
 - ◆ Development of Capability Catalogue
 - ◆ Development of Capability Prioritization document
 - ◆ Baseline Project and conscription Plan
 - ◆ Development of a Baseline Configuration Management Plan
 - ◆ Initial review of the existing systems and interfaces, where applicable
 - ◆ Development of Project Quality Assurance Plan
 - ◆ Recognize new technical infrastructure
 - ◆ Validation of high hazard technologies or concepts

The work products out of this step are:

- ❑ Potential Catalogue - This is a brief review of the desired capabilities and features required for this new system. Each capability will also have the hazards, assumptions, dependencies and a preliminary estimate. This document feeds into the preliminary Project Plan and Capability Prioritization document. This document does not go into meticulous detail about each capability and will not for example contain sample GUIs for each item. This detail is developed later in the Development phase and is only executed for capabilities that deemed a priority by the client.

- ❑ Potential Prioritization Document - This document is prepared as the result of the prioritization of the items listed in the Capability Catalogue.
- ❑ Vision Statement - This is a brief description of the goals and objectives to be accomplished by the project as a whole.
- ❑ Initial Task Plan - This is a baseline project and staffing plan based on the client's prioritization and Databiz development methodology.
- ❑ User Experience Engineering Documents - User Task Cases, Activity, Sequence Diagrams and Workflows.
- ❑ Paper Prototype - Document Prototypes are useful for application and client User Interface design concepts. The execution of the paper prototype will fetch out key features of the User Interface and underlying functionality. This allows our clients to prioritize the development of the application to the client's priorities.
- ❑ Quality Assurance Plan - This document describes the process to ensure quality measurements are performed and addressed throughout the software development life cycle.

Development

Development section represents an iterative process in which each separate capability and feature goes through its own analysis, design, build and test process. The total Development phase is broken into multiple stages each bearing one or more capabilities. The processes are structured based on the Capability Prioritization document. The last stage in the Development phase is reserved for ending integration testing and QA controlling such as Load and Performance testing. At the end of each stage the associated capabilities are ready for client review. This permits the client more flexibility in terms of deployment options since each stage represents a discrete slice of deployable functionality.

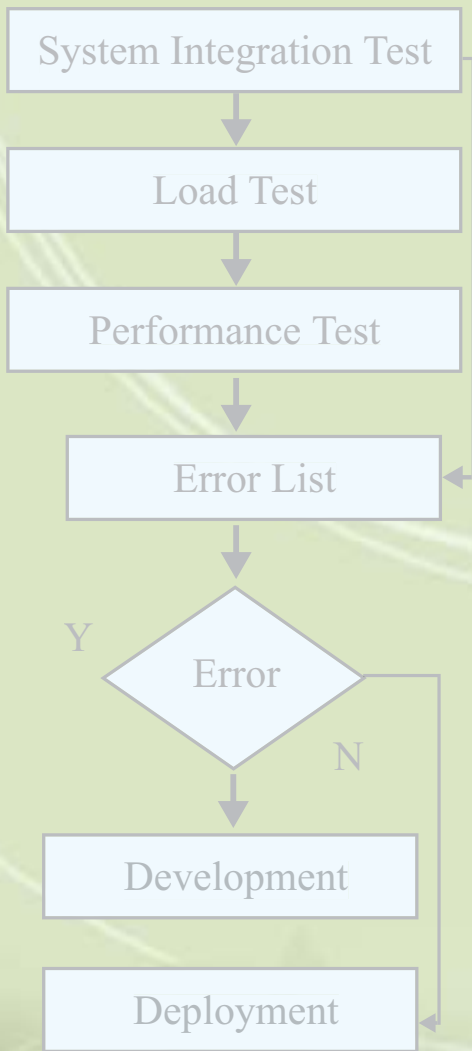

The factors in this stage are as follows:

- ❑ Requirements Analysis for discrete capabilities
- ❑ Document Prototyping and Detailed Design of the User Interface for each capability
- ❑ Detailed Design ❑ Test First Coding/Building
- ❑ Code Reviews ❑ Discrete Testing
- ❑ Developmental combination Testing
- ❑ Client review of incremental application capabilities

- ❑ Database Design (If extensive DB design is needed this would be broken out into its own stage)
- ❑ Revision or Test Plan r Revision of Project Plan

The work products from this stage are:

- ❑ Potential Requirement Document - This document starts out as the Capability Catalogue and is built incrementally as each capability goes through its detailed requirements phase. Performance expectations and Load requirements are also captured in this document.
- ❑ Discrete Test Scripts and Source Code -Unit Test First Coding every source code package is delivered with its own Unit Tests.
- ❑ Technical Documentation - As part of every stage the technical documentation is completed for each associated capability.
- ❑ Revised Database ERD - If needed DB modification will be documented and incorporated into the deployment scripts.
- ❑ Revised System Integration Tests - As new functionality is added the System Integration Test scripts are updated.
- ❑ Revised Work Plan - Each stage presents a benchmark in terms of the overall project progress. As stages are being finished the project plan is constantly revisited to reflect the latest data.

Quality Control

Once all of the application capabilities are developed and tested individually, the team requires to ensure that the integrated product is working according to the Capability Specification Document and System Combination Test scripts. Depending on the size of the project it may be necessary to have multiple iterations within the QA Stage. These final iterations include intensive memory profiling, load testing and performance testing to ensure that the product is ready for deployment.

Additional work products from this stage are:

- ❑ Ultimate System Integration Test Plan - This document is prepared incrementally based on the capabilities added in each new functionality stage. Additional test cases will be attached with this stage if any application states have not been adequately covered.
- ❑ Load Test Plan - This test is designed to see how the application behaves under production load.
- ❑ Performance Test Plan - This test is designed to validate that the final application meets performance expectations.

- ❑ Final Technical Documentation - These documents are prepared incrementally based on the capabilities added in each new functionality stage. Ultimate changes and Updates are made during this stage to ensure proper documentation for deployment and later support.

Deployment

On completion of the final Construction Stage the application is on process for User Acceptance Testing (UAT). Since the client will have been involved in reviewing each capability at the end of each stage minimal issues should arise out of User Acceptance Testing. After UAT is completed, the application is transitioned to the client's production support group. Also at this point in the project, the Project Manager will meet the client to execute project close out procedures.

The functions in this stage are as follows:

- ❑ Production Support Turn-Over
- ❑ Finalized Training Plan (If applicable)
- ❑ Delivery of Associated Project Materials (Source Code as agreed to in the Terms and Conditions, Documentation, etc.)
- ❑ Customer Satisfaction Survey

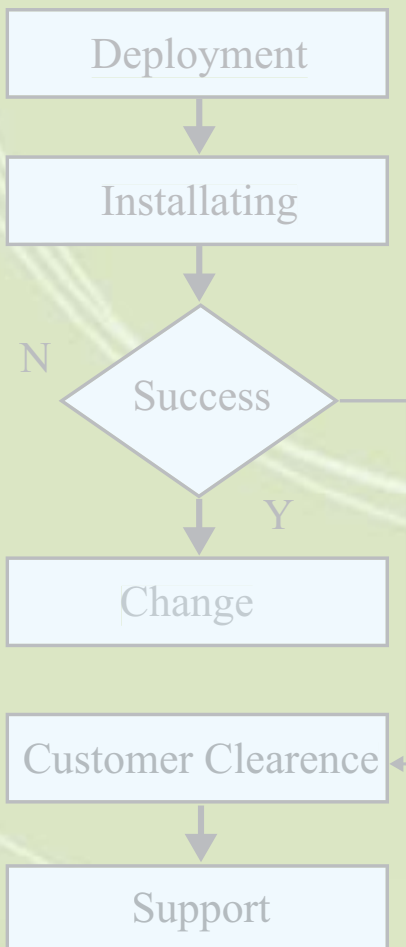

The final application is confirmed for releasing to our client only after the quality assurance team; project manager and client have reviewed the product and accompanying documents/reports, and signed-off on acceptance of the final release.

Support

For many of our client's a transition period is required during which the client's technical staff brings up to speed in supporting the application. Many methodologies deny these critical stages of a project. Databiz realizes the rollout of a new application is often when the client needs us the most.

Listed below are some of the services Databiz can provide during this phase:

- ❑ Production Support Transition
- ❑ Establishment of Issue Tracking
- ❑ Release Assistance
- ❑ Training Support
- ❑ Production Monitoring
- ❑ Help Services
- ❑ Contractual basis after sales support

Accounts

This phase is also very important because it is to take the responsibility of all the financial operation of Databiz.

Listed below are some of the services Databiz can provide during this phase:

- Records of all economical incoming information
- Records of all economical outgoing information
- Records of all employees financial information
- Provides all Accounting Information as to the requirements

Admin

This phase is responsible for Administration because it is to take the responsibility of all the Administrative operation of Databiz.

Listed below are some of the services Databiz can provide during this phase:

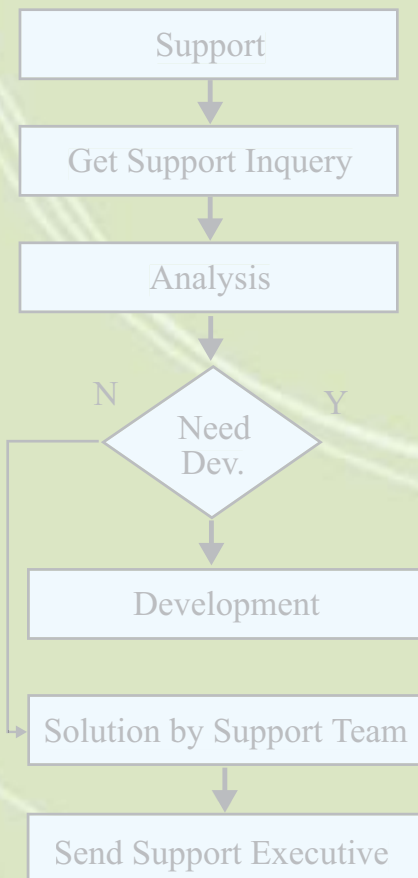

- Analysis to improve the total infrastructure
- Administration of all the key activities
- Action to improve project coordination
- Finding the complexity
- Providing the Administrative solution
- Ensuring the availability of all the necessary infrastructure by the project team

Human Resource Management

phase is responsible for improvement of Human Resource because it is to take the responsibility of HR quality maintaining, HR training, Recruitment operation of Databiz.

Listed below are some of the services Databiz can provide during this phase:

- Finding the vacancy to improve the operation
- Recruit the employees
- Training up the employees (both on the job and off the job)

Other Sister Concerns

The Monthly C-NEWS (www.cnewsvoice.com)

C-NEWS a monthly Computer magazine, is a product of the Publication Division of Databiz . It has been publishing every month since January 2002. It exists to bridge different segments of the Bangladesh such as IT community, professionals, corporate and industry people, vendors and buyers, students, home users and beginners and many more.

C-NEWS also highlights to the new users about the usage of computer with detailed manual and tries to publish the important features or operational manual of the mostly used packages. C-NEWS also publishes interview of different personnel of different segments of Bangladesh and takes their important notes and comments and inform the reader.

C-NEWS features on products and events news, product prices and news analysis, corporate computing, communication, e-commerce, career pages etc. It also informs the new generation of Bangladesh about the existing educational facilities of IT. It assists its reader in staying abreast of the current development in computing, to buy the right resources and to apply leading edge technologies and to enhance business functions. The other features of this publication for different people with different taste are games, utilities, patches, address on the web of software, shareware, screen savers, wallpaper, desktop themes and some programming source codes of some essential languages for those who are interested in programming and so forth.

Host Highlights (www.hosthighlihgts.com)

HostHighlihgts is a Hosting and IT solution provider company executed by a group of professional engaged in IT profession for several years. Established high quality and reliable server with Daily Backup option in Chicago USA has strengthen the company's movement in hosting business drastically. Its cheapest but high traffic and reliable servers are already in maintenance of numerous satisfied clients.

Host Highlights deals with Antivirus and Utility software (Microworld Escan, Unistal Crash Proof, Unistal Restore, Kaspersky Antivirus Solution) along with its Hosting server.
